

## Directions for use

### ANTI SHINE PRIMER Anti Shine Primer

Grimas Anti Shine Primer is a mattifying make-up primer that can be used for many applications. It is an ideal product to prevent a shiny effect and therefore particularly suitable for use on skin areas that can become greasy, such as forehead, nose and chin (the T-zone). It can also be applied on skin blemishes.

At the same time, Anti Shine Primer ensures better adhesion of any other make-up type that is applied over it (including foundation and eyeshadow), so that the make-up stays in place perfectly during the day. And if it is applied under mascara, then it also ensures beautiful full lashes.

In addition, Anti Shine Primer is ideal to use as a primer for the basic make-up after covering up eyebrows, for example when making a theater- or drag queen-make-up. The basic make-up will then cover better, so that the colour of the original eyebrows does not show through.

#### Method when used as a matting agent and / or as a primer for make-up:

Squeeze a little Anti Shine Primer from the tube onto a plastic spatula. Apply the Anti Shine Primer very thinly to the desired spot using a latex sponge or with your fingers. Then apply the makeup (if applicable).

#### Method when used as a primer for mascara:

Apply a little Anti Shine Primer to a dry and clean eyebrow / eyelash brush (BL1). Apply a thin layer of Anti Shine Primer to the eyelashes with this. Then apply the mascara.

#### Method when used as a primer after covering up of eyebrows:

Cover up the eyebrows as usual, but do not powder them off. Squeeze a little Anti Shine Primer from the tube onto a plastic spatula. Now dab a thin layer of Anti Shine Primer over the covered up eyebrows with the help of a latex sponge or with your fingers. Let this dry for a while. Then apply the basic make-up.

#### Removal

Anti Shine Primer can be removed with lukewarm water and soap (you can also use shampoo). Massage it in briefly and rinse off with lukewarm water. Do not use ready-to-use cleansing cloths.

## Safety information

### ANTI SHINE PRIMER Anti Shine Primer

<b>Packaging:</b>	Colour: transparent (tube) Content: 8 ml
<b>Appearance:</b>	Soft cream in skin tone.
<b>Ingredients:</b>	See label and composition.
<b>Toxicology:</b>	Assessed against the Cosmetics Regulation (1223/2009/EC).
<b>Improper use:</b>	Assessed according to the standard of consuming regularly the content of the largest package size (8 ml). No toxicological effect.
<b>Bacteriology:</b>	Contains less than 50 CFUs/g of bacteria, yeasts and moulds. Pathogens: not present. Work hygienically: with clean hands and clean materials.
<b>Dermatology:</b>	See dermatological declaration.
<b>Use on children:</b>	Not suitable for children.
<b>Around the eyes:</b>	May be used near the eyes.
<b>On the mucous membranes:</b>	May be used on the mucous membranes.
<b>Make-up in the eyes:</b>	Rinse with water.
<b>Durability:</b>	See label with symbols:  = period-after-opening  = date of minimum durability
<b>Storage:</b>	Store in a dry, dark place.

## Composition

### ANTI SHINE PRIMER Anti Shine Primer

INCI	<%
Aqua	90
Magnesium aluminum silicate, Silica (nano)	15
Glycerin	5
Xanthan gum	5
Methylparaben	0.2
2-Bromo-2-nitropropane-1,3-diol	0.05
CI 77491, CI 77492, CI 77499, CI 77891	10

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

## Dermatological declaration

### ANTI SHINE PRIMER Anti Shine Primer

In the dermatological declaration one can read the following:  
The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

#### CONCLUSIONS

Under the conditions of this test we found no evidence of primary irritation or allergic hypersensitivity.

None of the thirty patch-tests resulted in positive reactions after 24, 48 and 72 hours.

The investigating specialist for dermatology and allergology considers this test-product safe for use.
