

## Directions for use

### BLOOD CAPSULES

#### Blood Capsules

Grimas Blood Capsules are capsules of vegetable origin filled with a red powder that produces 'blood' when mixed with saliva. The capsules are used for various special effects in film/theatre and for Halloween.

#### Procedure

Put the capsule in the mouth (the capsule melts slowly) and bite down on it when the effect is required. Because of the ingredient citric acid, the flow of saliva is stimulated, which creates the effect of clear and slightly frothing blood.

#### Removal

Blood Capsules cannot be washed out of clothing.

Remove traces from the skin by first rinsing with cold water and then further cleansing the skin with Grimas Cleansing Lotion.

Do not use ready-to-use cleansing cloths.

## Safety information

### BLOOD CAPSULES

#### Blood Capsules

10 pieces

<b>Packaging:</b>	Colour: grey Content: 10 pieces
<b>Appearance:</b>	Red powder in transparent capsule.
<b>Ingredients:</b>	See label and composition.
<b>Toxicology:</b>	Assessed against the Cosmetics Regulation (1223/2009/EC).
<b>Improper use:</b>	Assessed according to the standard of consuming regularly the content of the largest package size (10 pieces). No toxicological effect.
<b>Bacteriology:</b>	Contains less than 50 CFUs/g of bacteria, yeasts and moulds. Pathogens: not present. Work hygienically.
<b>Dermatology:</b>	See dermatological declaration.
<b>Use on children:</b>	Not suitable for children.
<b>Around the eyes:</b>	Do not use near the eyes.
<b>On the mucous membranes:</b>	May be used on the mucous membranes.
<b>Make-up in the eyes:</b>	Rinse with water.
<b>Durability:</b>	See label with symbols:  = period-after-opening  = date of minimum durability
<b>Storage:</b>	Store in a dry, dark place.

## Composition

### BLOOD CAPSULES

#### Blood Capsules

INCI	<%
Sorbitol	75
Hydroxypropyl methylcellulose	25
Sodium cetearyl sulfate	10
Citric acid	5
CI 16255	10

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

## Dermatological declaration

### BLOOD CAPSULES

#### Blood Capsules

In the dermatological declaration one can read the following:

The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

#### CONCLUSION

No evidence of any skin disorder was detected in the test area of any of the 30 panellists after conducting patch testing for 24 h, 48 h and 72 hours according to the internationally recognised guidelines of ICDRG (International Contact Dermatitis Research Group).

It can be concluded that the use of the product will not cause any unwanted skin reactions due to an irritating effect.
