

Directions for use

CAKE MAKE-UP

Cake Make-up

Grimas Cake Make-up is a basic make-up that is easy to apply. It is used for visagie (television, film and photography) and as the basis for water make-up.

Procedure

Cake Make-up adheres best on a non-greasy skin. Clean the skin therefore first with Grimas Cleansing Lotion. Then wipe dry with a tissue.

You apply Cake Make-up with a slightly damp make-up sponge. Take the make-up sponge between the fingertips and squeeze it together to create a round surface. With this surface the make-up can be applied.

First dab a little Cake Make-up onto the hand to check the colour intensity. Then apply it evenly from top to bottom. Cake Make-up dries quickly, so you need to work quickly to achieve a nice result. Any stripes after drying can be gently rubbed away with a soft tissue or cloth.

Cake Make-up can be lighted and shadowed beautifully with Grimas Eyeshadow/Rouge. Cake Make-up can also be applied with a brush. Take the Cake Make-up out with a brush from the edge of the box rather than the centre, to avoid crumbs forming.

Cake Make-up gives a matt finish which does not need to be powdered off and stays in place well. If you do still want to powder off lightly, for example for photography, use Grimas Compact Powder or Make-up Powder. Also under warm and moist conditions (lamps during photography, tropical climate) Cake Make-up will still stay in place well. Do not leave the moist sponge lying on top of the make-up, as the Cake Make-up will then become saturated with moisture. Allow the make-up to dry naturally before closing the box.

Removal

You remove the Cake Make-up with Grimas Cleansing Cream or Cleansing Milk. Do not use Afschmink, as this consists of waxes and oils that actually let the Cake Make-up stick to the skin. You can lightly wash the skin with lukewarm water and soap (or shampoo) to already remove a great part. Then you continue cleaning with Cleansing Cream or Cleansing Milk by massaging it in and removing it with a soft tissue.

Do not use ready-to-use cleansing cloths.

Cleanse the skin afterwards with Grimas Cleansing Lotion.

Safety information

CAKE MAKE-UP

Cake Make-up

35 g

Packaging:	Colour: grey Content: 35 g
Appearance:	Pressed powder in skin tones and various colours.
Ingredients:	See label and composition.
Toxicology:	Assessed against the Cosmetics Regulation (1223/2009/EC).
Improper use:	Assessed according to the standard of consuming regularly the content of the largest package size (35 g). No toxicological effect.
Bacteriology:	Contains less than 50 CFUs/g of bacteria, yeasts and moulds. Pathogens: not present. Work hygienically: with clean hands, clean water and clean materials.
Dermatology:	See dermatological declaration.
Use on children:	Suitable for use on children. Has the Danish A-category certificate.
Around the eyes:	May be used near the eyes.
On the mucous membranes:	May be used on the mucous membranes.
Make-up in the eyes:	Rinse with water.
Durability:	See label with symbols:  = period-after-opening  = date of minimum durability
Storage:	Store in a dry, dark place. Dry with a tissue after use.

Composition

CAKE MAKE-UP Cake Make-up

INCI	<%
Talc	70
Aqua	20
Paraffinum liquidum, Peg-8	10
Cetyl alcohol, Glyceryl stearate, Palmitic acid, Peg-40 hydrogenated castor oil, Stearic acid	5
Butylene glycol cocoate	5
Aminomethyl propanol	1
Disodium lauroamphodiacetate, Sodium cetearyl sulfate	1
Lanolin oil	1
Polymethyl methacrylate	1
Tetrasodium EDTA	0.1
Methylparaben	0.27
2-Bromo-2-nitropropane-1,3-diol	0.05
CI 77491, CI 77492, CI 77499, CI 77891	50
CI 77266	10
CI 77007	5

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

Dermatological declaration

CAKE MAKE-UP Cake Make-up

In the dermatological declaration one can read the following:
The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

CONCLUSIONS

Under the conditions of this test we found no evidence of primary irritation or allergic hypersensitivity.

None of the thirty patch-tests resulted in positive reactions after 24, 48 and 72 hours.

The investigating specialist for dermatology and allergology considers this test-product safe for use.

Dr.med.Werner Voß
