

## Directions for use

### DERMA WAX

#### Derma Wax

Grimas Derma Wax is a transparent wax that adheres to the skin well, used for professional make-up effects such as creating various wounds and deformities on the skin. Its composition means that Derma Wax also adheres long lasting to soft and mobile parts of the skin, staying elastic.

#### Procedure

Use the convex rounded side of the Derma Wax Spatula to take Derma Wax out of the jar. By scraping it out, you already make the texture a bit flexible. You then make the wax easier to model by applying it to the ball of your thumb and scraping it off again with the spatula two or three times. The wax must be flexible but also firm and must definitely not be allowed to get too soft and sticky.

Apply Derma Wax to the skin with the convex rounded side of the spatula and smooth the edges down so that grease and moisture cannot get underneath. Smooth the Derma Wax surface and edges off with the fingertip, using a little bit of Grimas Cleansing Cream. Dab all over with a dry, clean make-up sponge. Doing this, you remove the excess Cleansing Cream and you create a skin-texture effect.

Powder the whole with a make-up sponge with Grimas Transparent Powder to matt and fix it; then turn the sponge over and continue dabbing with the clean side until the excess powder has been removed.

To create an 'open wound', the Derma Wax construction has to be 'cut open' with the sharp side of a Derma Wax spatula. Lubricate the tip of the spatula with a little bit of Cleansing Cream. This will allow the spatula to slide more easily through the Derma Wax, preventing it from sticking to the spatula. Colouring: To add a suggestion of depth to the 'wound', colour the bottom of the wound using black make-up. Then you colour the inner side of the wound with dark red make-up (Grimas Water Make-up Pure or Crème Make-up Pure).

#### Removal

Scrape the Derma Wax off the skin with the spatula. Massage Grimas Multi Remover Pure or Cleansing Cream into the skin. Repeat the above 2 steps as many times as necessary. If a slight film forms on the skin, cleanse it afterwards with Grimas Cleansing Lotion.

## Safety information

### DERMA WAX

#### Derma Wax

25 ml

60 ml

<b>Packaging:</b>	Colour: grey Content: 25 ml, 60 ml
<b>Appearance:</b>	Hard transparent wax in light skin tone.
<b>Ingredients:</b>	See label and composition.
<b>Toxicology:</b>	Assessed against the Cosmetics Regulation (1223/2009/EC).
<b>Improper use:</b>	Assessed according to the standard of consuming regularly the content of the largest package size (60 ml). No toxicological effect.
<b>Bacteriology:</b>	Contains less than 50 CFUs/g of bacteria, yeasts and moulds. Pathogens: not present. Work hygienically: with clean hands and clean materials.
<b>Dermatology:</b>	See dermatological declaration.
<b>Use on children:</b>	Suitable for use on children. Has the Danish A-category certificate.
<b>Around the eyes:</b>	Do not use near the eyes.
<b>On the mucous membranes:</b>	Do not use on the mucous membranes.
<b>Make-up in the eyes:</b>	Rinse with water. Consult a physician if necessary.
<b>Durability:</b>	See label with symbols:  = period-after-opening  = date of minimum durability
<b>Storage:</b>	Store in a dry, dark place.

## Composition

### DERMA WAX Derma Wax

INCI	<%
Oxidized polyethylene, Glyceryl hydrogenated rosinat, Rosin	75
Paraffinum liquidum, Ricinus communis oil, Octyldodecanol	40
Acrylates copolymer	15
Tocopherol, Lecithin, Ascorbyl palmitate, Citric acid	1
Glyceryl stearate, Glyceryl oleate	0.1
CI 16255	1

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

## Dermatological declaration

### DERMA WAX Derma Wax

In the dermatological declaration one can read the following:  
The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

#### CONCLUSIONS

Under the conditions of this test we found no evidence of primary irritation or allergic hypersensitivity.

None of the thirty patch-tests resulted in positive reactions after 24, 48 and 72 hours.

The investigating specialist for dermatology and allergology considers this test-product safe for use.

Dr.med.Werner Voß

Investigating specialist  
for dermatology and allergology

## Safety declaration

Has been evaluated at:

The toxicity profile of the ingredients used, taking account of any contaminants present.

Interactions between the various raw materials.

Quantities of weight and volume the consumer is exposed to.

Foreseeable improper use by the consumer-group.
