### **Directions for use**

### DIRT PASTE Dirt Paste

Grimas Dirt Paste is a yellowish very thick paste that can be used for zombie make-up and other effects. The structure can still be modelled for a limited time after application. The paste can be coloured with make-up.

#### **Procedure**

To improve adhesion to the skin, first clean with Grimas Cleansing Lotion. Apply Dirt Paste to the skin with a Derma Wax spatula. The stiff structure of Dirt Paste lets you produce three-dimensional effects.

You can apply Dirt Paste without colouring or you can colour the paste after application with Grimas Water Make-up.

Close the packaging properly after use.

#### Removal

Scrape Dirt Paste off the skin with a Derma Wax spatula. Residues of Dirt Paste can be removed from the skin with cold water initially and then with soap and water.

If Dirt Paste gets onto clothing, rinse it out under a tap. Leave the item of clothing to soak in water containing a pre-wash (Biotex). Then wash it by hand or put it in the washing machine.

# **Composition**

### DIRT PASTE Dirt Paste

| INCI                                  | <%   |
|---------------------------------------|------|
| Aqua, Hydrogenated starch hydrolysate | 95   |
| Carbomer, Magnesium aluminum silicate | 8    |
| Aminomethyl propanol                  | 1    |
| Methylparaben                         | 0.2  |
| 2-Bromo-2-nitropropane-1,3-diol       | 0.03 |
|                                       |      |
| CI 77492                              | 4    |
| CI 77499                              | 4    |
| CI 77891                              | 4    |

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

# **Dermatological declaration**

#### DIRT PASTE Dirt Paste

In the dermatological declaration one can read the following: The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

#### CONCLUSIONS

Under the conditions of this test we found no evidence of primary irritation or allergic hypersensitivity.

None of the thirty patch-tests resulted in positive reactions after 24, 48 and 72 hours.

The investigating specialist for dermatology and allergology considers this test-product safe for use.

Dr.med.Werner Voß

Investigating specialist for dermatology and allergology

# **Safety declaration**

Has been evaluated at:

The toxicity profile of the ingredients used, taking account of any contaminants present.

Interactions between the various raw materials.

Quantities of weight and volume the consumer is exposed to.

Foreseeable improper use by the consumer-group.
