

## Directions for use

### HYGIENIC GEL

Hygienic Gel

Grimas Hygienic Gel is a quick-drying, clear gel and is used for the hygienic cleaning of hands, work surfaces (such as tables) and brushes.

Hygienic Gel cleans effectively without using water and soap. After use, the cleaned object dries very quickly.

Keep away from open flame. Avoid contact with eyes. If the product gets in the eyes, rinse well with lukewarm water.

#### Procedure for hands

Apply Hygienic Gel on the palms of the hands and make a few washing movements, so that all parts of the hands are reached.

#### Procedure for work surfaces

Apply Hygienic Gel to the work surface to be cleaned and rub it out with a piece of paper (for example kitchen roll) or a clean, dry cloth.

#### Procedure for brushes

Clean the brushes after use as usual.

Then apply Hygienic Gel to the bristles and massage it well, so that it also ends up on the inner bristles.

## Safety information

### HYGIENIC GEL

Hygienic Gel

100 ml

<b>Packaging:</b>	Colour: transparent (bottle) Content: 100 ml (bottle with spout top)
<b>Appearance:</b>	Clear gel.

## Composition

### HYGIENIC GEL Hygienic Gel

INCI	<%
Isopropyl alcohol	70
Aqua	30
Aminomethyl propanol	1
Carbomer	1
Tetrasodium EDTA	0.1

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

## Dermatological declaration

### HYGIENIC GEL Hygienic Gel

In the dermatological declaration one can read the following:  
The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

#### CONCLUSION

No evidence of any skin disorder was detected in the test area of any of the 30 panellists after conducting patch testing for 24 h, 48 h and 72 hours according to the internationally recognised guidelines of ICDRG (International Contact Dermatitis Research Group).

It can be concluded that the use of the product will not cause any unwanted skin reactions due to an irritating effect.
