

Directions for use

BODY GLUE

Body Glue

Grimas Body Glue is a strong and long-lasting skin glue, suitable for many purposes.

It is ideal for making glitter tattoos with Grimas Sparkling Powder, Pearlite (Metallic), Shimmer Flakes or Crystal Flakes. The glitter tattoos will be water resistant and can last for several days. Body Glue can also be used for attaching Wool Crepe moustaches, beards and goatees, tulle wigs, bald caps, latex noses and sets (among other things).

Body Glue is waterproof and does not contain alcohol or latex. It's also safe for use near the eyes, so it can be used as an eyelash adhesive as well. When using it near the eyes, of course be careful not to accidentally glue the eyelids together.

The packaging has a cap with a brush, with which the skin glue can easily be applied to the desired place.

Procedure

Apply a thin layer of Body Glue with the brush.

For optimum adhesion, wait for the skin glue to become transparent before applying anything to it.

Removal

Remove Body Glue with Grimas Multi Remover Pure.

Do not use ready-to-use cleansing cloths.

Safety information

BODY GLUE

Body Glue

10 ml

Packaging:	Colour: transparent (cap with brush) Content: 10 ml
Appearance:	Syrupy white liquid.
Ingredients:	See label and composition.
Toxicology:	Assessed against the Cosmetics Regulation (1223/2009/EC).

Durability:	See label with symbols:  = period-after-opening  = date of minimum durability
Storage:	Close packaging properly. Store in a dry, dark place. (frost free).

Composition

BODY GLUE

Body Glue

INCI	<%
Aqua	65
Acrylates/ethylhexyl acrylate copolymer	50
Caprylyl glycol	1
Sodium dehydroacetate	1
Phenoxyethanol	0.35

The ingredients that are present in the product in the greatest proportions are listed first.

Ingredients that are present in the product to less than 1%, are listed in random order at the end of the list. Then the pigments and colorants are addressed, even if they are used in large quantities.

< is less than.

Dermatological declaration

BODY GLUE

Body Glue

In the dermatological declaration one can read the following:
The products have been dermatologically tested for 24, 48 and 72 hours on 30 persons with healthy skin. No irritation occurred.

CONCLUSION

No evidence of any skin disorder was detected in the test area of any of the 30 panellists after conducting patch testing for 24 h, 48 h and 72 hours according to the internationally recognised guidelines of ICDRG (International Contact Dermatitis Research Group).

It can be concluded that the use of the product will not cause any unwanted skin reactions due to an irritating effect.
